

# BULLSEYE LASER FIRE TRAINING UNIT

**EFS Ltd** are currently the only company in the UK which uses a Laser Fire Training Unit called BullsEye for all levels of fire safety training.

It allows training to take place entirely indoors, in the work environment providing candidates with the practical understanding of fire safety and evacuation within their workplace.

The Laser unit uses augmented reality, sensing the size of a room portraying a fire in the form of a LED driven digital flame which responds to the candidate's actions of aiming and sweeping the laser fire extinguisher across it in order to put it out. The laser unit is used for fire safety training and uses a conical laser to replicate extinguisher discharge rather than a dry-chemical or CO2 extinguisher. Because only laser light is emitted from the training extinguisher, extinguisher training can now be conducted virtually anywhere without the cost and clean-up associated with conventional extinguishers.

- Less mess.
- NOT weather dependent.
- Cost effective.
- Simulates real fires.
- Safer than conventional fire training.
- Ideal for office based staff.
- Easy to grade candidates.
- More candidates trained in a shorter space of time.
- Allows full evacuation to be practiced by candidates.
- Can be used in conjunction with real fire training for complex / higher risk premises.

Change the way you train and contact us today!
